

Soils of the Eastern United States and Their Use XIV, Vol. 36: The Fargo Clay Loam (Classic Reprint) (Paperback)

By Jay Allan Bonsteel

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Soils of the Eastern United States and Their Use XIV, Vol. 36: The Fargo Clay Loam In the better drained areas it is usually grayish brown or gray or drab, while at greater depths and in localities where the drainage is poor the subsoil is of lighter drab or bluish color. It is a marked characteristic of the Fargo clay loam, wherever it has been encountered, that the subsoil is highly calcareous. A large number of determinations of calcium carbonate have been made in connection with the study of this soil type, and in the majority of cases the calcium carbonate content of the subsoil of the Fargo clay loam has ranged from 3 1/2 to as high as 24 percent. This is unusually high when compared with the lime content of other soils and subsoils. This characteristically calcareous subsoil distinguishes the Fargo clay loam from the black soils of the Clyde series, while the Fargo clay loam is distinguished from the dark-colored soils of the Washburn series, in that the latter contain considerable quantities...

Reviews

This book is definitely not straightforward to get started on studying but extremely exciting to read. It is really simplistic but shocks in the 50 percent of the ebook. Once you begin to read the book, it is extremely difficult to leave it before concluding.

-- **Ally Reichel**

This publication is amazing. It is definitely basic but shocks in the fifty percent of your publication. You wont feel monotony at anytime of your own time (that's what catalogues are for concerning if you question me).
