HISTOIRE DE L'EMPIRE OTTOMAN DEPUIS SON ORIGINE JUSQU'A NOS JOURS (17)

To download **Histoire de L'Empire Ottoman Depuis Son Origine Jusqu'à Nos Jours (17)** PDF, you should access the web link listed below and save the document or have accessibility to other information that are in conjunction with **HISTOIRE DE L'EMPIRE OTTOMAN DEPUIS SON ORIGINE JUSQU'A NOS JOURS (17)** book.

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 104 pages. OCLC Number: (OCoLC)57366770 Subject: Drug resistance in microorganisms -- United States. Excerpt: . . . risk of infection. Many studies investigating antibiotic-resistant bacteria and their impact on human health combine epidemiologic studies with molecular subtyping - also called DNA fingerprinting - a technique that translates bacteria's genetic material into a bar code that can be used to identify specific pathogens and link them with disease outbreaks. For example, following an outbreak of a diarrheal disease among people in a community, an epidemiologic study would determine all the common exposures among the people with the disease, and molecular subtyping of bacterial isolates could determine what pathogens were responsible for the disease. While the use of antibiotics in animals poses potential human health risk, its use of antibiotics is also an integral part of intensive animal production in which large numbers of poultry, swine, and cattle are raised in confinement facilities. (See fig. 1.) Antibiotics are used in animals to treat disease; to control the spread of a disease in a group of animals when disease is present in some of the animals; to prevent diseases that are known to occur during high-risk periods, such as after transport, when the animals are stressed; and to promote growth - that is, to allow animals to grow at a faster rate while requiring less feed per pound of weight gain. This use of antibiotics is commonly referred to as growth promotion and generally entails using low doses of antibiotics over long periods of time in large groups of animals. Many animal producers believe the use of antibiotics for growth promotion also prevents disease. Antibiotics are generally administered by injection to individual animals and in feed...
