Command and control functions facilitate the intricately organized bio computer systems internal to the cell. Guidance of command and control functions is direct from static intelligence in the human genome. Recognizing all organic life shares similar biologic systems dictates that similar genetics are shared amongst species. A Prime Genome represents all of the fundamental elements and unique portions of the genomes that have ever existed on Earth. The original Prime Genome provided the general instructions necessary to create the various forms of life that have flourished. Ecometabolous is the strategy by which the Prime Genome morphed the elements of a hostile planet into a functional ecosystem with the expected outcome resulting in human form. Also introduced is the concept of the universal component of matter the tritron and sub-sub atomic particle physics, which comprise the essential fabric of the universe.
